

# GhostCore Stealth System: WraithSkin Technology

WraithSkin is an advanced stealth field system integrated with the GhostCore suite. It manipulates electromagnetic emissions and thermal radiation signatures using a dual-band cloaking mesh:

1. **\*\*Electromagnetic Reflection Torus\*\*** - Bends outgoing energy signatures using layered magneto-resistive toroids.
2. **\*\*Thermal Inversion Fabric\*\*** - Radiates heat in distributed cold zones to avoid thermal lock.
3. **\*\*Quantum Phase Scramble\*\*** - Slightly offsets local quantum emissions to prevent scanning and targeting.

WraithSkin reacts to proximity threats and dynamically reconfigures based on environmental feedback, making it ideal for space warfare, covert insertion, and orbital denial.

Classified Grade: PHASE-NULL SIGMA.
