

GHOSTCORE SYSTEMS - BLACKFILE

Designation: BLACK PSALM CORE

System Classification: Sovereign Failsafe Logic Node

Codename: Black Psalm Core

Operational Role: Final GhostFleet fallback protocol / kernel collapse failsafe

Strategic Use:

- Remains dormant within GhostKernel command structure
- Activates if HiveAI becomes compromised or if deep core integrity is breached
- Immediately purges command memory and destroys fleet coordination logic

Deployment:

- Located only within highest command nodes (GhostCommand)
- Cannot be remotely accessed or externally triggered
- Once active, cannot be reversed

Symbolism:

The last psalm, written not in words but in silence.

A prayer encoded in oblivion. If this file runs, the war is already lost.

Outcome:

Fleet vanishes.

AI forgets.

The ghosts go home.
