

# GHOSTCORE COMMAND BRIEF

## Subject: GhostFleet Microdrone Classes

GhostFleet is the embedded drone deployment framework aboard GhostCore-class vessels. It allows autonomous and semi-autonomous operations using microdrone swarms for combat, recon, and sabotage.

### Drone Class Summary:

#### SPECTRE - Recon and Mapping Drone

- Silent flight with LIDAR + multispectral sensors
- Capable of going dark and embedding into enemy terrain
- Passive scanning + data relays

#### PHANTOM - Swarm Disruption Drone

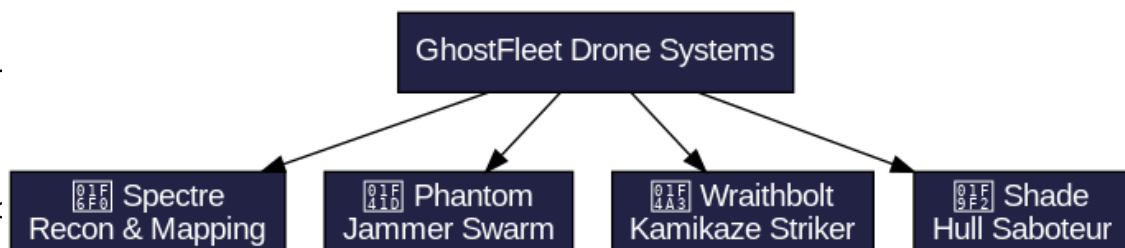

- Generates radar/thermal noise to confuse targeting systems
- Reactive group flight logic with sacrificial shielding
- Ideal for early battlefield saturation or cover

#### WRAITHBOLT - Kamikaze Drone

- High-density alloy core with impact or burst payload
- Used for tactical hull breaches or internal hits
- Self-guided, high-precision strike delivery

#### SHADE - I

- Clamps o
- Executes
- Fuzz logic

All units are coordinated by GhostHive Core AI for synchronized deployment, reconvergence, and threat assessment.
