

GHOSTCORE WEAPON SYSTEMS - BLACKFILE

Designation: ABADDON'S HARROW

Weapon Classification: Orbital Railgun Lance

Alias: The Harrow of the Abyss

Power Source: Direct TPV Core Feed (Dual-phase capacitor bank)

Firing Mode: Linear electromagnetic acceleration of dense kinetic slugs

Operational Use: Ship-to-orbit strikes, anti-capital ship salvos, kinetic orbital redirection

Strategic Value:

- Capable of mass-velocity strikes > 22 km/s
- Non-nuclear, zero-propellant, minimal heat signature
- Fires from low EM-visible sheath due to GhostCore containment geometry
- Can be used for orbital denial, fortress penetration, or shockwave displacement

Prophetic Reference:

Abaddon - Angel of the Abyss. The Harrow bears his name for a reason.

No explosive trace. Just erasure.

Key Features:

- Triple-capacitor surge channel
- Monolithic rail spine integrated with WraithSkin sheath
- Autonomous recoil suppression via magnetic damping
- Smart-slug deployment with adjustable density (Depleted Uranium, Tungsten, Osmium)

Suggested Countermeasures:

None successfully documented.
