

GHOSTCORE TACTICAL ARMAMENTS OVERVIEW

Classified Weapons Systems Annex

Golgotha's Dart - Plasma Kinetic Micro Drone

Miniaturized drone-fired plasma-tip dart. Designed for stealth strike missions. Operates under low-signature flight, synchronizes with Lazarus Pulse coils to evade tracking vectors.

The Cross - Photon Energy Lance

High-yield photon cannon utilizing modulated TPV field alignment. Ideal for orbital denial and ship-to-ship suppression. Capable of precision vaporization or radiant wall projection.

Spectral Tongue (aka Serpent's Tongue) - Microwave Disruption Array

Reactor-fed waveguides produce focused bursts of high-energy microwave fields. Effective at disabling electronics, radar arrays, and sensor suites on enemy craft.

EMP Singularity Coil - Inertial Collapse Weapon

Triggered magnetic collapse of molten lead containment coil. Generates short-range focused EMP blast. Use case: terminal denial, electronic kill-switch, or area blackout.

Eden Shard - Photon Pulse Repeater

Mid-range, rapid-burst weapon utilizing crystal oscillation to deliver photon bursts. Effective against fast-moving aerial or orbital targets with precision penetration.

WraithSkin - Cloaking / Reflection Field

Adaptive electromagnetic cloaking shell. Bends EM emissions, light, and heat signatures. Weaponized via field inversion to reflect energy bursts or disrupt incoming lock-ons.

Tower of Silence - Radiation Suppression Barrier

EM-quiet system used to nullify reactor signatures during stealth operations. Can be used to blanket an entire tactical zone in anti-scan interference.
