GHOSTCORE SYSTEMS - BLACKFILE

Designation: THE SERPENT'S TONGUE

System Classification: Microwave Disruption Array (MDA)

Codename: The Serpent's Tongue

Operational Role: Directed Energy Soft Kill / Sensor Suppression / Electronics Disablement

---

Strategic Use:

- Projects variable-frequency microwave beams via reactor-fed waveguides

- Effective against drones, bridge consoles, sensor arrays, and tactical AI systems

- Offers three modes: Focused, Sweep, and Pulse for flexibility in range and intensity

Deployment:

- Mounted on hull turret rings, drone bays, or station defenses

- Often paired with EMP or Echo Fang systems for cascading confusion

- Can preface boarding ops or blind shielded vessels before kinetic follow-up

Symbolism:

The forked tongue does not strike - it speaks confusion, interference, lies.

Before the serpent bites... it whispers.

Outcome:

Target systems flicker, stutter, then die in static.

The sky remains quiet - and the fleet walks unseen.
